I like the lay out. I was able to get what I wanted. I liked they way they followed what I asked them to do and that they were neat. They did a good job at running cables and took care to make it look good. Everything seems to be working properly. I am very pleased with the suggestions they made and that the installation is not intrusive. I was very pleased that they showed me how to get a tax credit to get a new roof so they could install the panels. This is not something their competitors knew about or suggested to me. They added value to the project by doing this.

The whole thing was great. The installation crew was good. They did their job, were professional, explained things to me and then left. I was happy with all of it.

We would like to recognize the installation crew. They did an outstanding job throughout the process. We did not want any visible lines running outside the house. They ran everything through our attic to the outside of the garage, matched up the paint very well for the small area that was visible and did a fantastic job on the drywall and paint inside the garage. We can't even tell where they went through the wall. They ran into a problem when setting up the modem to run on our wireless system. After several attempts and tests, they determined it would have to be hard wired and they ran the wiring back up through the top and down from the attic and only a small amount of wiring shows in the closet, which they also painted to match the wall. This crew was very friendly, professional and knowledgeable and went above and beyond to do an excellent job. We told them it was obvious they take a lot of pride in their work.

Our sales person and his management were very sensitive to our budget and listened to our specific energy needs and helped us negotiate a price and system that we are very happy with that we feel will fulfill all of our needs for the long term. Our sales person was very knowledgeable and professional. He was able to answer our questions during the initial presentation and follow up calls. We had talked to a few other companies and their presentations fell short in this area. Ed's representation gave us confidence in Future Energy Savers. We were also very impressed with the quality of the materials and the workmanship during the installation.

Eugene Tyshkevich was completely thorough in explaining with no pressure all about the benefits of solar and the working crew were very professional and polite. They worked very hard to make sure it was done in a timely manner and right the first time.

COMMENT

I would like to recognize the sales representative and the lead installer for their exceptional services on my project. The sales representative was extremely helpful and presented plenty of options for me to select for my panels. The installer did a very professional job. I have worked in repair services for 50 years and owned my own business for 25 years, so I know quality work when I see it. They did an excellent job!

I am most satisfied with the solar panels from Future Energy Savers because I love that my neighbor comes over to watch my meter go backwards and I save so much money!

I chose this company because they use American made products and have an excellent warranty. I was very satisfied with the entire process once my initial concern was addressed. All workers were professional and on-time and installation went very smoothly.

I would give them a 10. The service was very professional. This guy came out and waited for the final inspection; he asked me for some paint to paint over any areas where the electrical panels had to be installed. He chose to paint my house while he waited for the inspection, which is professional and beyond all other companies' services.

I think the whole process went smoothly with Future Energy; from the initial visit, which was very thorough, the continuing communication about the ordering and installation date, and the installation crew were helpful and kept me updated about the progress. I am extremely pleased with the end result and hope this solar system will last for many years.

Everything was great. Everyone was nice. I didn't work with them as much because I work nights at the hospital so I sleep during the day. The people were all very kind. Everyone was great and they did an excellent job. We are very pleased. We will definitely recommend them to anybody who is interested.

The salesperson who came out broke it down and made it really easy to understand and logical. He gave us the numbers and based on the numbers and the logic as well as how nice he presented the information, we decided to do it. It can get kind of confusing but the salesperson was so well over prepared. My husband is a math professor and I'm not, but the salesperson made it very simple for both of us to understand. He satisfied my husband who is a mathematician. We wish it was cheaper and that is what kept us from getting it sooner but we know it is a long term investment.

Tom and Roy were very good. Roy was the key player and was very knowledgeable and brought his own energy bills and when we saw the bills drop we were impressed. Lisa and Alyssa are very nice as well, they are all nice. But the sales rep you send out is very important.
