I interviewed 6 different companies before choosing Applied for my Solar Installation. The company communicated extremely well throughout the process and guided me through permitting, HOA approval, SoCal Edison applications, etc. We were up and producing solar power in less than 60 day. Last electric bill before solar was \$840 for 1 month, first bill after solar was \$1.40! Would HIGHLY recommend Applied.

### GUILDMEMBER SINCE 2013

Very pleased with installation. We like that they are a local company. We like the Enlighten software that allows us to monitor our system.

Applied Solar Energy gave us the best price for our panels. We were looking for panels made in the United States and they provided them. Ms. Donoso was very knowledgeable about the product and gave us endless information regarding solar. We interviewed 7 different solar companies and went back to Applied Solar Energy because Ms. Donoso was the best and honest representative regarding the solar values. We strongly recommend that everyone get solar for their homes and call Applied Solar Energy, they are the best in the field.
