Kulps of Stratford was proactive in that they came to us and offered to provide the quote. They gave us several options to choose from and helped us select the right roofing material for our project. Their installation crew was courteous and professional throughout the job. They were very mindful of our schedule/timing and they kept an extremely neat work area.

Kulp's has always been professional in dealing with my inquiries. I had Kulps do 2 jobs. One was a smaller job of repairing what was about 3 foot square section of rotted roof overlayed with rubber. The work has prevented further leakage into the building. The other was doing an entire church roof with Decra. Their installers were efficient and worked all the time they were here and finished quickly though they had to deal with a couple of bad weather days. I would prefer to have Kulp do all roofing work, but at times it is difficult to budget the higher cost, but quality work.

From the time they came out, to their design of the solar system for us, all the way through to the installation, all of the employees have done a great job!

I was impressed with every part of the job. We saw them first at a trade fair, and the man explained the product thoroughly. They did a great job of explaining all concerns that we had. Every phase of the job was absolutely wonderful.
